

IMAGING PEOPLESOFT FINANCIALS

Hardware/Software/Browser Requirements

WORKSTATION CONFIGURATION

For Scanning

Operating System

- Windows 2000 or XP Professional (support for Vista is expected by the time of implementation in July 2008) (Windows ME and XP Home Edition and Macintosh operating systems are NOT supported)

Recommended Configuration

- Windows XP Professional
- 500 MHz or greater processor
- 256 MB RAM minimum; 512 MB recommended
- 1 GB available hard-disk space
- 1280 x 1024 SVGA screen resolution; dual monitors are supported
- 19" display or greater
- Standard TCP/IP networking; 100-megabit Ethernet connection for scanning workstation; high-speed internet connection minimum for viewing workstation
- Scanning workstation must have a slot available to accept a Kofax Adrenaline SCSI card to drive each scanner, or the workstation must be USB-enabled

Software

- Perceptive Software's ImageNow client
- CaptureNow scanning software (a separate CaptureNow license is required for each scanning workstation)

For Viewing Only

WebNow is the browser-based option for searching, retrieving, viewing, and processing already-imaged documents. Because the user accesses WebNow using an Internet browser, the only software requirements are a Web browser such as Internet Explorer, Netscape, Firefox, or Safari, and Sun Microsystem's Java Runtime Environment (JRE). Since these are already installed on most workstations, WebNow is a good option for those users who only need to work with documents already in the system. It is the **ONLY** option for those using Macs.

Supported Configuration

- Windows 98 or greater with the following:
 - Web Browser
 - Internet Explorer 5.1 or greater
 - Netscape 6.2 or greater
 - Firefox 1.5 or greater
 - Sun Microsystem's Java Runtime Environment (JRE) 1.4.2_12 or JRE 1.5_10 (also known as JRE 5.0 Update 10; this is the recommended JRE version)
- Macintosh OS X or greater with the following:
 - Apple Safari Web Browser 1.2.3x with Java 1.5 Update 4

RECOMMENDED SCANNERS

Four scanners are being recommended that have been used in a number of areas by ImageNow users at the University and have been found to be an excellent combination of cost, features, and reliability. They are:

- CaptureNow DR-2580C with CaptureNow ISIS Level I
- Fujitsu fi-5120C with CaptureNow ISIS Level I
- DR-3080CII Color Document Scanner with CaptureNow ISIS Level II
- Fujitsu fi-5530C2 with CaptureNow ISIS Level II

There are a number of other scanners that Perceptive Software has certified for use with ImageNow. Contact Dan Wagner for more information about these other scanners.

ADDITIONAL DETAILS

For detailed information on licensing costs, recommended scanners and configurations, and possible additional hardware requirements, please visit the EFS Web site at www.finsys.umn.edu and click on Imaging.
